CYBER SECURITY

PEACE OF MIND.

ENJOY YOUR PRIVACY IN COMPLETE SAFETY!

Chartering out yachts, properties and private jets entails an incalculable risk for owners when they wish to use & enjoy their assets themselves:

You have no idea what kind of listening devices, CCTV cameras, or similar equipment charter guests might have installed during their use of your assets.

To ensure you are not being eavesdropped on, harmed, or blackmailed, you must have your assets inspected for all types of surveillance devices prior to your visit. Until recently, this was done exclusively using scanners, but there is now a significant new development:

Specialist detection dogs + advanced TSCM — identifying threats before they can materialize!

CYBER SECURITY

THE EVOLUTION OF SWEEPING

A trained dog-nose backed by technology! We are combining specialist detection dogs with advanced TSCM capabilities to identify hidden surveillance devices:

ODOUR-BASED DETECTION

Internationally certified dogs recognize the specific scent of memory chips and electronic components — finding devices even when switched off, shielded or concealed in furniture, cavities or paneling.

SIGNAL & SPECTRUM ANALYSIS

Advanced measurement technology detects active signals — GSM, LTE, 5G, Wi-Fi, Bluetooth — and documents findings to a legally usable standard.

Guided with military precision, our dogs and technology are working as one. Three specialists, one coordinated sweep — together faster and unique!

CYBER SECURITY

DOG SWEEPING

OUR DOGS IDENTIFY EVERY ELECTRONIC TRACE – EVEN WHEN SWITCHED OFF.

98% DETECTION RATE!

Our certified detection dogs can locate all types of electronic devices even when expertly concealed:

- Listening devices
- Smartphones
- Mini cameras
- SIM & micro-SIM
- USB & hard drives
- SD / memory cards
- GPS trackers
- Burner phones

FULL-SPECTRUM DETECTION:

- We identify both active signals (GSM, LTE, 5G, Wi-Fi, Bluetooth) and nontransmitting devices — including hidden cameras and covert GPS trackers — for complete coverage of every surveillance threat.

„Where the human eye and technology reach their limits, the dog's nose begins.“

CYBER SECURITY

FIELD OF OPERATIONS

PRIVATE JETS & CHARTER
Screening of aircraft cabins, crew areas and ground transfer vehicles.

YACHTS
Targeted inspection of sensitive onboard areas, including owner cabins and technical zones.

MEETING ROOMS & CONFERENCES
Securing meeting spaces and technical infrastructure ahead of strictly confidential discussions.

WHY A DETECTION DOG:
SPEED Large areas searched in minutes, with minimal disruption.
PRECISION Finds devices the human eye and technical scanners miss.
FLEXIBILITY Buildings, meeting rooms, vehicles, jets, yachts and outdoors.

Also deployed for: Counter-industrial-espionage, compliance checks, luxury real estates, evidence securing, private security investigations — indoors, in vehicles, on board and outdoors.

“Security remains a precondition to freedom.”
